

Keylezz® Update Terminal Pro

The **Keylezz® Update Terminal** is the link between the **Keylezz® Lock Manager software** (for furniture locks) or **D&K Visit®** (visitor management) and the electronic offline components such as **Keylezz® furniture locks**, electronic fittings or cylinders.

RFID media (cards or keyfobs) are used as the medium for data transfer between the terminal and, for example, the Keylezz furniture locks, and they exchange information wirelessly in a network on card.

Possible applications

- **Update terminal** in a Network on Card system
- **Update terminal** for displaying the locker number
- **Re-encoding terminal** for recoding or applying applications to employee badges
- **Access terminal**, e.g. for changing rooms
- **Visitor registration terminal** (only in connection with our visitor management system **D&K Visit®**)

Product highlights

- Large colour display
- Encoding and segmentation of all common RFID media (Legic Prime, ATC and CTC; Mifare Classic, DESfire; HID SEOS etc)
- Power supply via POE
- Alternatively available with W-LAN
- Available with relay

Matching the Keylezz® furniture locks
